

SELECTIVE DISPLAY OF WINDOWS ON AN AUXILIARY OUTPUT DEVICE

ABSTRACT

A method, apparatus, system, and signal-bearing medium that in an embodiment select a subset of windows displayed on an output device for display via an auxiliary
5 output device, e.g., a projector. In various embodiments, the selection of the subset is based on a group affiliation or based on a list of allowed or disallowed applications. In other embodiments, the image on the auxiliary output device is selectively frozen or displays a pre-set image while the image on the output device changes. In this way, the displayed content on the auxiliary output device is selectively controlled, which allows
10 for a more effective presentation.
